DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Regarding claim 6, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention.

 See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1,6,7,11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wellenegger et al. (US 66,775,254).

Regarding claim 1, Wellenegger teaches a radio communication method whereby a communication terminal apparatus sets a TFC (Transport Format Combination) pointer based on an up/down/keep signal from a radio base station apparatus, and performs uplink transmission based on a TFC indicating a transmission rate not exceeding this

7

Art Unit: 2618

TFC pointer (see fig.3; col. 5, lines 15-61. In this case, the power adjustment either up

or down to achieve desired level obviously leads to transmission rate adjustment since

the transmit power and the transmission rate are proportionally changed, therefore this

teaching of Wellenegger reads on the "transmission rate not exceeding" of the present

invention); wherein TFC pointers of a communication terminal apparatus and radio base

station apparatus are made to match using a TFCI (Transmit Format Combination

Indicator) transmitted from said communication terminal apparatus (see fig.3; col. 5,

lines 15-61). In addition, since the system of Wellenegger is a W-CDMA standard (i.e.

the downlink and uplink channel format should be the same and therefore once the

remote terminal adjusted its power according to the order of the base station, the uplink

channel format from the remote terminal will have the updated power adjustment to

match with the power of the base station.

Regarding claim 6, the rejection of claim 1 is herein incorporated.

Regarding claim 7, the rejection of claim 1 is herein incorporated. In addition, since the

channel format of Wellenegger includes TFCI, it is obvious that the system of

Wellenegger must have a TFCI extraction to extracts TFCI transmitted from the remote

terminal.

Regarding claims 11-13, the rejections of claims 1 and 7 are herein incorporated.

Allowable Subject Matter

5. Claims 2-5,8-10,14,15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MINH D. DAO whose telephone number is 571-272-7851. The examiner can normally be reached on 8:30 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, MATTHEW ANDERSON can be reached on 571-272-4177. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
